We would test listings entered once.

_____ (the MLS) is interested in testing ListOnce, a platform where a brokerage enters a listing once and it reaches the MLS in RESO standard fields. We would test it in _____ (the market), starting about _____, for up to 90 days.

HOW THE TEST WORKS

1. **Test data first.** ListOnce sends sample records to our test environment, or we pull its RESO test feed, before any real listing.
2. **Our rules apply.** Our required fields, entry window and input form are set up in ListOnce. A listing missing a field is held, never sent half done.
3. **Nothing live without our written approval.** No live listing reaches our system until we approve go live in writing, and we may pause or end the test at any time.
4. **The brokerage owns the listing.** Members only listings, the seller's choice, are never sent to us. Listing data is not sold.
5. **No cost to us.** The platform is already built. We give a contact for the test and a short review at the end.
6. **Confidential.** Each side keeps the other's non public information private.

What this letter is not. It is not a contract, an endorsement, an exclusive or a commitment to go live. Either side may end it by email at any time. Any live use would need a separate written agreement. Data access, if any, follows our existing data license terms.
